UltraFlex™ DC

UltraFlex™ DC is an anchored resilient floor system combining the best features of both designs. UltraFlex™ DC features a unique ladder subfloor that provides high performance play and a stable platform for the maple surface. This system, when selected with fully FSC® Certified components, contributes the maximum LEED points available.
UltraFlex™ DC

The UltraFlex™ DC system utilizes dimensional wood subfloor which absorbs shock and reduces leg fatigue. The subfloor design also allows for excellent under floor air flow.
