

Painted Boarders, Logos and Lines

- Numerous brands of paints are successfully used on hardwood sports floors for game line and graphics applications. Brands of paint and compatible gymnasium floor finishes differ between flooring contractors, typically based on their own success and preference of particular product application.
- Industrial Enamels are often applied on floors in combination with oil modified seals and finishes. There are also a number of finish manufacturers who produce paints especially for use with their products.
- Regardless of selected paints, we recommend only gymnasium floor finishes included in the Maple Flooring Manufacturers Association list of approved finishes.
- Sound paint and finish adhesion relies on proper abrasion before applying paints, and full cure time and additional abrasion before applying added coats of paint or finish.
- While most paints are suitably cured in 24 hours, in moderate temperature and humidity, some paint colors such as highly pigmented shades can require considerably longer drying time.
